

Environmental protection

General

- » Heat recovery
The waste heat produced by machinery and equipment is used for heating purposes.
- » Separation of recyclables and waste
All waste is separated into recyclables and residual waste.
- » Gaseous pollutants
To a large extent, the production process is pollutant-free - any pollutants that do arise are cleaned by means of suitable filtration devices.
- » Works traffic
17 minibuses are provided for staff transportation.

Product-specific

- » Corrosion protection
The need for corrosion protection with the storage of raw materials is avoided.
- » Oil mist
All machinery and equipment is equipped with suction and filtration devices.
- » Packaging
We reuse our supplier's packaging material to some extent. Limited plastic or shrinkwrap packaging is used. Packaging methods using natural materials (e.g. wooden pallets) are used as an alternative.
