IMPORT & EXPORT OF PARTS LISTS

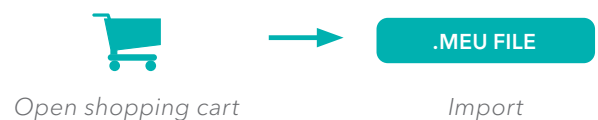

Save time with the import of your own Excel tables

Using the 'manual entries' function, the contents of Excel tables can be directly added into the offline shop or the web shop.

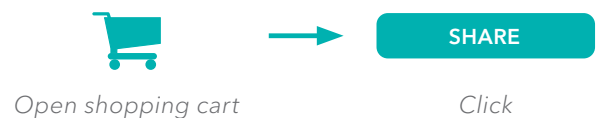

Working together efficiently – online and offline

The parts lists can be created in the offline shop, saved as „.meu files“ and sent to the person who places the order.

Share shopping carts with your team

Saved shopping carts can be shared with and edited by any colleague who has a Meusburger account.

WIZARDS AND CONFIGURATORS

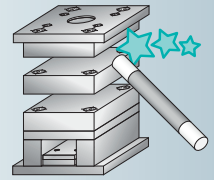

... FOR MOULD MAKING

Complete mould bases, assistance in the selection of suitable components, and more with just a few clicks – our numerous wizards, configurators and selection guides are there to support you both in the web shop and in our offline shop.

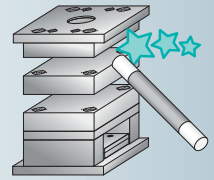

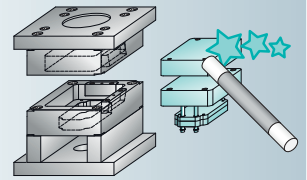

Hot runner nozzles

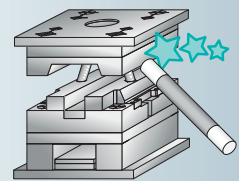

Mould plates for lengthwise mould types

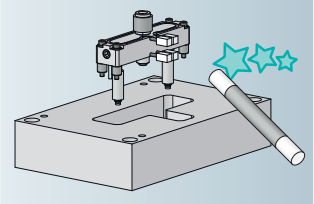

Mould plates for crosswise mould types

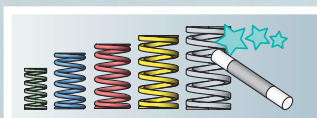

Change moulds

Sliding core moulds

Hot runner moulds

System compression springs

More configurators for mould makers

- » Gas springs
- » Micro moulds
- » Clamping systems
- » Blocks for eroding with starting holes

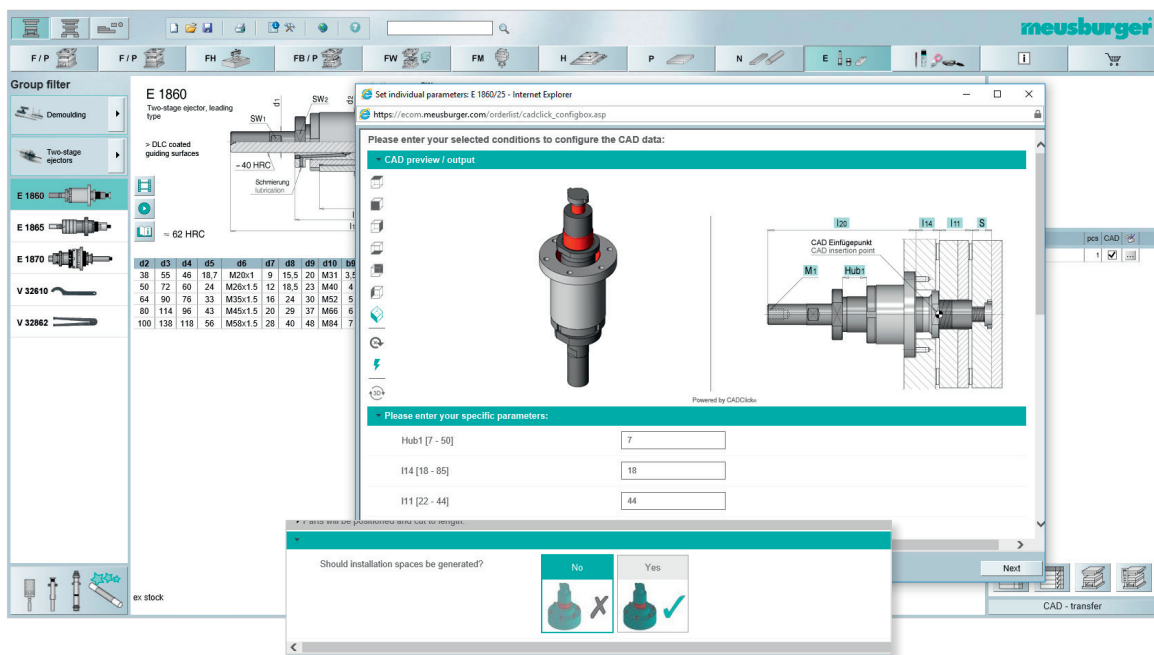

CONFIGURABLE 3D DATA

Immediate configuration of CADClick 3D data

In our web and offline shop you can configure your 3D data for numerous products directly with CADClick. Simply place the desired item in your parts list, tick the 'CAD' box and click on the 'CAD transfer' button at the bottom right of the page. Then a query window opens and you can start the configuration. Here you can not only specify minimum or maximum values, but also determine some further parameters and generate installation spaces.

How you benefit:

- » Clear dimensional and auxiliary drawings
- » Value entry with dynamic limits
- » Parameters of machined components are displayed directly
- » 3D preview is updated immediately
- » Assembly can be exported ready for installation
- » Neutral data formats and direct interfaces for all common CAD systems

Standard parts databases

Meusburger products are listed in standard parts databases for the following CAD systems:

Meusburger NX Tool

In cooperation with our customer Schmidt WFT we have developed a CAD tool, which is now available to you free of charge. This tried and trusted tool is coordinated with the Siemens NX CAD system and enables designers to carry out a simple and time-saving design process. Configurations of components which are native in the system can be selected and all parameters are automatically adjusted. Installation spaces as well as colour codes developed together with the VDWF Association of German Tool and Mould Makers are also integrated in the tool. If changes are made, the parts list is automatically regenerated.
