## intorms

20<sup>™</sup> ISSUE, OCTOBER 2022

meusburger

## Hello,

Every day, we give our best to ensure continuous product availability and provide you with optimal support for your projects. If you would like to learn more about how we maintained our service level through 2022 and what else kept us busy this year, turn to my interview on page 8.

In this year's 'informs', we also show you how we guarantee that the products you order arrive promptly. In this issue, we take you on a company tour and give you a comprehensive look behind the scenes at Meusburger. On pages 14 to 39, you will learn all about our production, how we machine our plates as well as our components and much more.

If you want to order from us, we are there for you and provide you with outstanding online service. Whether it's the web shop, the wizards and configurators, the product tips in our blog, the advice from our experts or the automated order processing - our digital service perfectly rounds off our product range. You can read all about what we have to offer in this area on pages 40 to 53.

I hope you enjoy the company tour and the exciting inside look at Meusburger and I look forward to continuing to work with you in the future.

Enjoy the read...

S. Meusburge

Managing Director

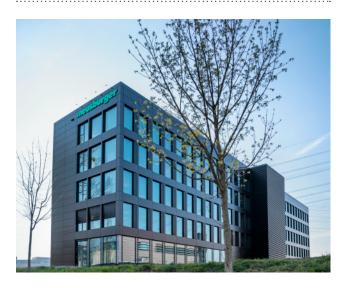

## Find out more.

## Meusburger

- 8 Chatting with Guntram Meusburger
- 12 We are locally based and present worldwide.

From the raw
material to the
finished product

During our company tour, we take a look behind the scenes together. Starting with our raw material warehouse, we show you our furnaces, how our plates and components are machined and much more. We also pay a visit to our apprentices in the training workshop. Enjoy the read!

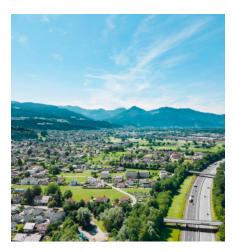

In this latest edition of our company magazine, you will find out how we ensure continuous product availability. Join us on a company tour and get an inside look at our production, the digital Meusburger world and much more. You'll be surprised.

## Online service

4.2 We show you our online world, from ordering to consulting and delivery - and not just regionally, but worldwide.

We work hard for sustainability

58 Did you pay attention?

60 On a journey through time

#### Mr Meusburger, your customers benefit from continuous supply security. How do you ensure this?

One of our biggest advantages is that we have a large warehouse and a high degree of in-house production to fall back on. We have long relied on these two factors so we are optimally positioned to remain a reliable supplier even in challenging times. At Meusburger, 100% of the plates are produced in-house and standard plates can be dispatched directly from stock. Various raw materials are additionally available for further processing in the company's outdoor storage area of around 24,000 m<sup>2</sup>. With a total floor space of about 20 hectares in Vorarlberg, we can provide our customers continuous availability of our products as well as planning security.

#### Meusburger is well-known for its large product range. Will there be any additions to the assortment in 2022?

For us it's important that our wide product range is perfectly matched to the mould and die making industry. That's why we have new products in all areas again this year. Especially noteworthy is our expansion of the hot runner range in March 2022. With the new HMT4 hot runner manifold, we have taken another step towards standardisation. Our tried and trusted FH hot runner mould can be created with just a few mouse clicks. Customers can now choose from four different manifold series, which gives them even more options. Likewise, we have expanded the hot runner control range with one of our own innovations, the profiTEMP TM hot runner diagnosis device. We are also constantly developing practical and helpful components such as the new internally cooled compact slide, which enables targeted temperature control right up to the injection moulded part. So, as you can see, we do not only rely on our years of experience in all areas but also on in-house production.

#### Apart from new products, were there any other important topics that were centre stage in 2022?

Of course, we are also constantly developing digitally. Some of the major projects that we started last year have continued on into this year. Optimising processes significantly advanced the automation of offers and orders in particular. Our goal is to make the ordering process as simple and transparent as possible for our customers. Our knowledge management system plays an essential role and supports our development in many areas. So you can look forward to what will happen next year. Meusburger is digitally equipped for the future.

#### What does the future hold for Meusburger? Are you planning on creating more areas of business?

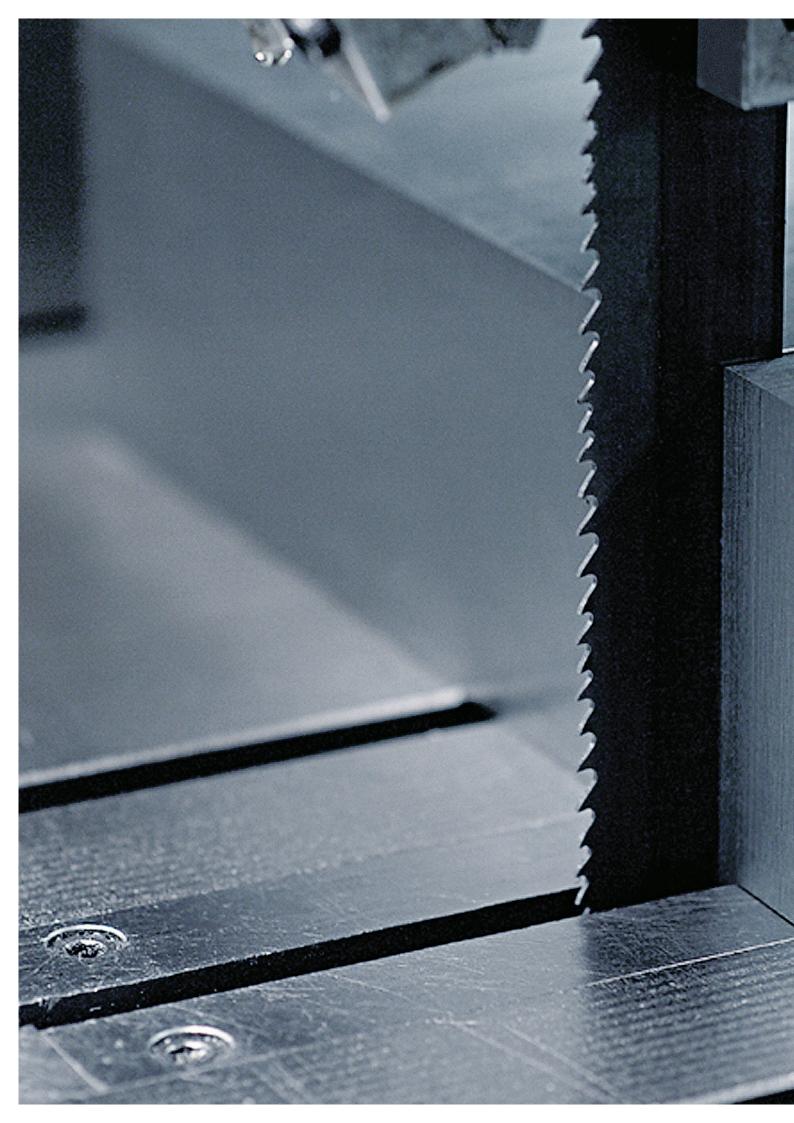

Thanks to the new division, we are very well established for our customers in the mould and die making industry and offer a comprehensive product range to meet their needs. In the future, we will concentrate on further optimising the existing areas step by step and will not expand the portfolio to include new business areas. I am very pleased that we can optimally support our customers with the best quality and a unique product range along the entire value chain. Of course, this would not be possible without the outstanding dedication of our employees. Everyone from our apprentices to our sales team gives their best every day to meet customer needs. That's why I look optimistically to the future.

#### Another important event this year was the move to the new office building in Hohenems. Can you reflect on that?

The new building was completed on schedule in March 2022 after a construction time of just twelve months, and the first 200 employees subsequently moved in. Our entire sales team is now

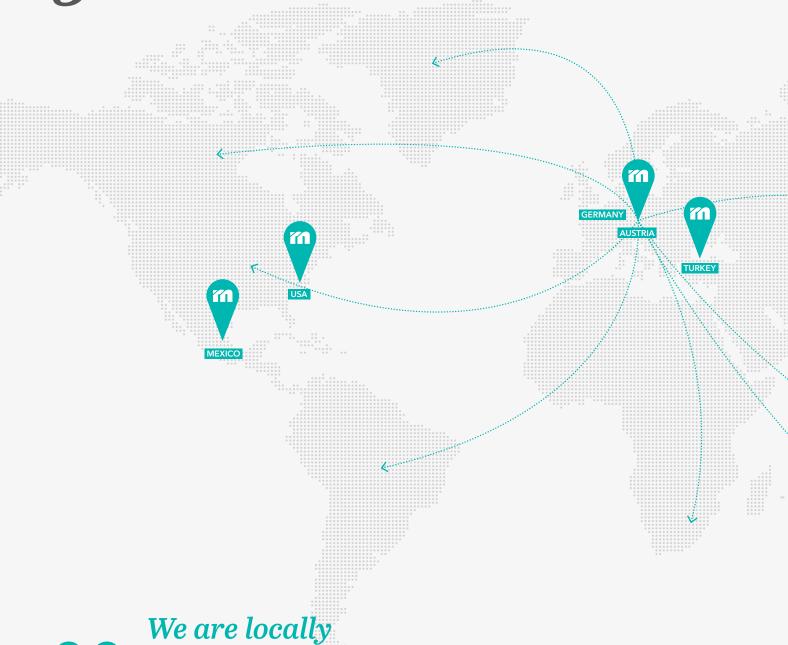

concentrated at the Hohenems location, which means we are even better coordinated for our customers. The office building also provides us with new training and event facilities, which opens up new possibilities. With the new building in Hohenems, the space still available there and all previous additions, we are now able to meet our customers' requirements and have a high degree of planning security. Read all about it in this year's company magazine and then visit us in Vorarlberg and see us in person. We would be delighted!

#### Thank you for chatting with us, Mr Meusburger.

# The right product guaranteed

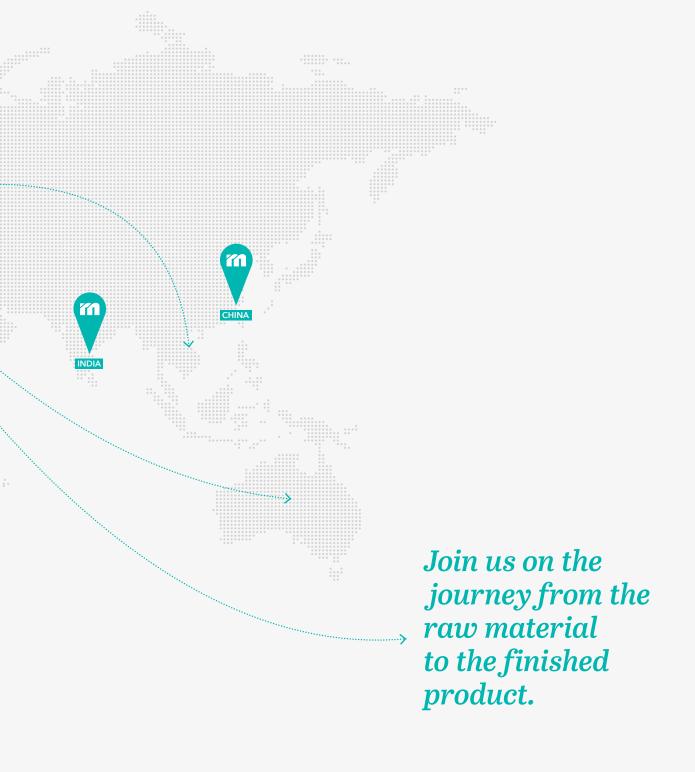

**99** 

We are locally based and present worldwide.

#### The mail is here – a package from Meusburger has arrived. We appreciate that you ordered from us.

Whether you are looking for mould bases, die sets, components, workshop equipment or whatever else you need, you will find the right product for your project at Meusburger. Even when you need it fast. With Meusburger, you can always rely on a timely delivery. This is mainly due to our large warehouse and our high degree of in-house production. Nearly all items from our catalogue and web shop are available in stock, picked in the shortest possible time and sent to you via our optimally networked logistic partners. You benefit from not only a first class order and delivery service but also from continuous supply security.

We will gladly show you exactly how we ensure that the package you have just received arrives promptly. Join us for a company tour so you can see how our processes work. Come along with us on the journey from the raw material to the finished product - we are happy to welcome you to Meusburger.

LINGENAU LOCATION

Page 38–39

## It starts with sheet metal

Sheet metal is the basis for our standard parts. That's why in order to have a well-stocked standard parts warehouse, a filled and sorted raw material warehouse is essential. So this is exactly where we would like to start our tour with you and as you can see, you can't miss it.

#### **RAW MATERIALS**

In order to always supply the highest quality products, we get our raw materials only from the best steel works. We carry out spectral analysis and strength tests in our facilities again after delivery.

#### storage spaces

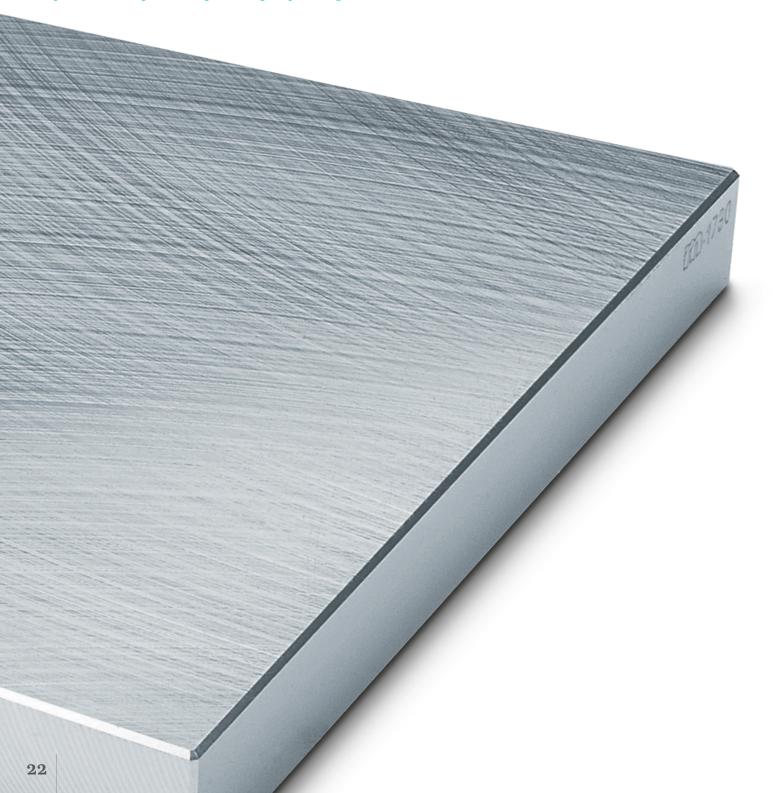

In addition, three high-bay warehouses with approx. 5,000 storage spaces ensure continuous availability.

### From sheet metal to plate

Follow our sheet metal that was heat-treated for stress relief on its way through production to one of our three high-bay warehouses in Wolfurt. Before it waits there for machining, it must go through a few steps.

#### **SAWING**

As soon as our high-bay warehouse needs to be refilled, we pick up sheet metal, heat-treated for stress relief, from our plates warehouse. The  $2,000 \times 6,000$  mm sheet metal is sawn into strips on one of our nine long band saws.

#### SHOT-BLASTING

In the next step, the strips are further processed in our shot-blasting facility. Scale and burr are removed here. This is a standard process for us and creates many advantages for subsequent machining. One of the things shot-blasting does is reduce the wear of moulds and machines. Moreover, it prevents contamination of the coolant in the next process.

#### HIGH-BAY WAREHOUSE

Primary material for further machining is stored in our high-bay warehouse.

- 3 high-bay warehouses in Wolfurt
- A total of 6,060 warehouse boxes
- 5,000 kg capacity for each warehouse box
- A total of 30,300 tonnes of steel

Still just raw strips, our future plates wait for further machining. These are then taken and carefully brought into their final form in several steps. Then they are ready for dispatch as finished standard plates.

#### SAWING

When necessary, we get a raw strip from the high-bay warehouse and saw it to the required length on our machines.

#### MILLING

In the next step, we mill the custom plates in width, length and thickness. They also get appropriate holes depending on the item.

#### **GRINDING**

Next, the plates undergo our distinctive segment grinding to within 0.05 mm. This ensures optimal parallelism of the plate and a high surface quality.

#### INSPECTION

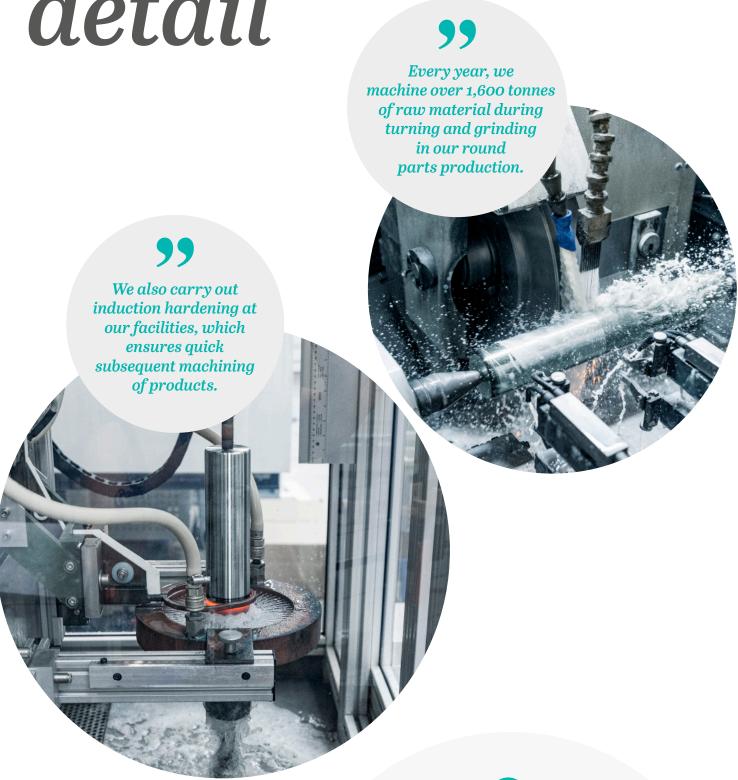

The plates are now finished and undergo a final inspection before they go to the warehouse. For this purpose, we rely on one of the most accurate measuring devices on the market.

## To the smallest detail

Q

Our own metallurgical laboratory guarantees quality in terms of material and heat treatment. Here we monitor the condition of our products.

Welcome to our components production. As always, our top priority is maximum production depth and the highest possible degree of in-house manufacturing. That's how our products end up in the automated small parts warehouse, where they are waiting to be ordered by you. Feel free to have a look around.

In mould and die making, every  $\mu$  is decisive. Failure to maintain absolutely correct tolerances may complicate the entire construction process. Sticking to the exact dimensions is a top priority for us so our customers are guaranteed consistent high quality. That's why we use one of the most precise measuring devices on the market. In our tour, you can learn more about the  $\mu$ -exact inspection at Meusburger.

### What is inspected?

The standard plates of all our production lines are thoroughly measured at regular intervals. That way, we not only guarantee consistent accuracy of our plates, but it also allows us to regularly check our machines.

Plates with form and position tolerances under 0.05 mm are generally inspected. In addition, our components are constantly being measured in our facilities as a part of process optimisation.

For special machining, customers receive a detailed measurement report upon request.

"

Plates with form and position tolerances under 0.05 mm are generally inspected.

### Why do we inspect?

It is important to us that customers can rely 100% or our components. By carrying out consistent inspection we can ensure that all requirements are met. That way errors during installation and the resulting costs can be avoided.

### For comparison

Exact measuring guarantees compliance with the tolerances. With the help of the measuring system used, we can check to within 0.003 mm.

0.003 mm

**Spider silk:** Ø 0.006 mm

**Human hair:** Ø 0.05 mm - 0.08 mm

Newspaper: ca. 0.08 mm

## What happens to the plates after they have been inspected?

Depending on their size and weight, our plates are sorted into spacious shelves or stored in special areas on the floor.

Plate warehouse size: 18,000 m<sup>2</sup>

Around 26,800 items in stock

Around 96,000 catalogue items, 56,200 of which are plates

Learn more about our quality:

www.meusburger.com/quality

## Everything for your workshop

The tour now leads us on to the automated small parts warehouse. We have many items stored here, including all our workshop equipment. This guarantees that you receive the products you order in the shortest possible time so you can save time and money and enjoy high-quality products.

Our product managers gladly explain more about our workshop equipment range:

"

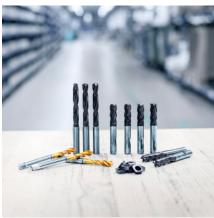

What makes us stand out in the clamping equipment area? Definitely our high-quality clamping devices, which are available from stock. They can securely clamp injection moulds, stamping dies and workpieces to be machined.

Carsten Streck, Product Manager Clamping Equipment "

Our cutting tools are perfectly adapted to mould and die making and are ideally suited for high-quality steels with their high strengths. We use most of the tools every day in our own production. You can benefit from our expertise in this area with our cutting data calculator.

Markus Sperger, Product Manager Cutting Tools

To the cutting data calculator:

99

Offering you the right consumables for your application is a top priority for us. Whether you are a mould maker or die maker – our mission is to offer you the perfect selection of items available on the market simply and directly.

Johannes Dobmeier, Product Manager Consumables "

We offer our comprehensive product range in EDM copper and graphite in different versions and material grades. Over 500 different pre-machined 'ready to clamp' electrode blanks are available from stock. We also gladly offer custom dimensions based on customer request.

Carsten Streck, Product Manager EDM Accessories

"

Finishing is the most important step when it comes to producing your mould. That means a good surface finish. Our range includes everything you need for this, from air tools, micro motors, rotary burrs and mounted points to polishing accessories.

Matthias Gehrer, Product Manager Surface Finishing Equipment

Of course, the hot runner systems area you in hot runner systems. An example complex projects, our field engineers is also part of our company tour. accessories based on your specifications or give you a comprehensive overview. Follow the magic wand in our web shop or explore all the tools here:

#### Did you know?

We are integrated in standard parts libraries for several CAD systems. Use these native models and design directly in your CAD system. Thus, we want to support you with the installation of simple and complex components.

#### Meusburger NX tool

This tried and trusted free tool is coordinated with the Siemens NX CAD system and enables designers to carry out a simple and time-saving design process.

# Therefor you personally

You have been given a thorough look behind the scenes at Meusburger in our company tour. Anything still missing? Do you have further questions, comments or requests about our products and services? Then we are gladly there

for you. We are available for you on site in many countries or in our headquarters in your language. We would like to introduce you to three of your contacts.

We ensure that you receive the best possible on-site support. As the link between our customers and Meusburger, we bring your interests, needs and requests to the company. That way, new product ideas get realised and your work is made easier.

As field engineers, we are trained in specific areas and can therefore provide you with competent technical advice. That way, we can familiarise you with the advantages of our products and provide you with the best possible support for specialist questions and challenges. We can help you select the optimal product for your needs.

# Optimising processes together

As the company tour ends, we have one more question for you: would you like to sustainably secure your company knowledge and work in a process-optimised manner? We can help you with that, too. With our custom software and consulting services, we equip you for current and future challenges.\*

# Sustainable knowledge retention WIVIO Software

- Central management of existing knowledge and experience in your company
- Employees have access to relevant information regardless of time and location

# What advantages do you have?

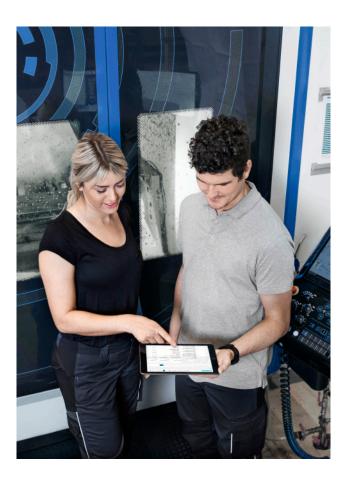

- Quick launch
- Practical and uncomplicated
- Efficient collaboration
- Process overview

\* WIVIO, mERPio and the book are currently only available in German-speaking countries.

# Process reliability and efficiency merpio

- Integrated ERP solution for mould, die, and jigs and fixtures construction
- Brings order to everyday work and efficiency to production processes

# Software and consultation hand in hand

The combination of our software and consultation distinguishes what we offer in our complete solution. That's because it is very important for us to provide you with professional and comprehensive consulting in addition to our digital solutions - even beyond implementing the software. We want to look optimistically to the challenges of the future together with you.

- Hourly rate calculation
- Knowledge retention

#### Our book tip

'Erfolg mit Wissensmanagement' (Success with Knowledge Management) by Guntram Meusburger

Just send an email to software-consulting@meusburger.com and receive a free copy.

Globalisation started at Meusburger in 2010. After the subsidiary company in China was founded, additional companies in Turkey, the USA, India and Mexico were established. Over the years, not only the number of subsidiary company employees has grown. Now, we also have warehouses in China, Mexico and India. This enables us to offer you one of our greatest strengths – continuous availability – worldwide.

	China	Turkey	USA	India	Mexico
Establishment	2010	2011	2012	2014	2015
Warehouse	m			m	m
Field sales representatives	m	m	m	m	m
Internal sales representatives	m	<b>7</b>	7/1	m	70

# Many products can be shipped on the same day they are ordered, including ejectors, spare parts for hot runner systems, and products from the area of temperature regulation. By building warehouses in these countries,

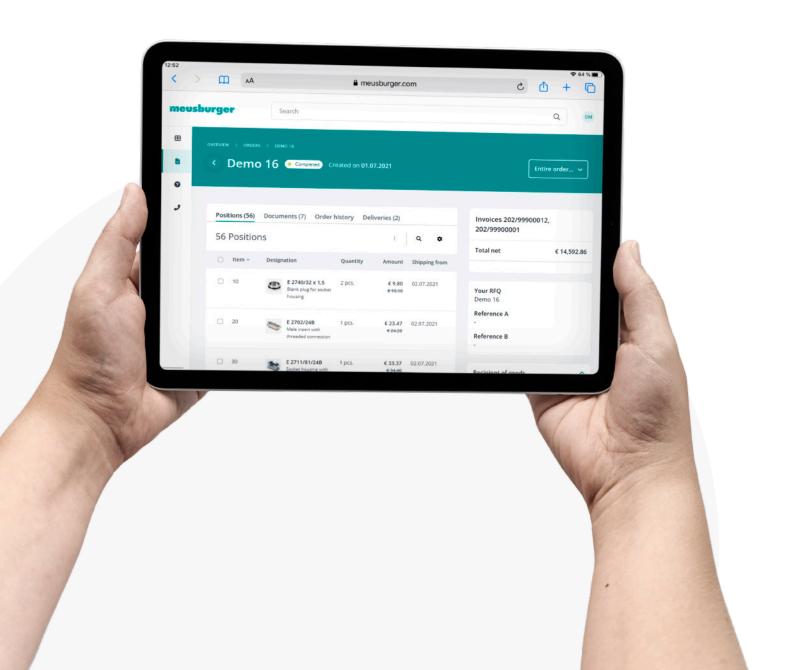

we have been able to significantly reduce lead times.

As you are used to in Europe, our highly trained employees are also there for you at our subsidiary locations. Maintaining a close customer relationship is very important to us. Needless to say, therefore, that you can rely on your personal contact in internal and field sales

service

# An overview of everything

We are pleased that you found what you were looking for and ordered from our product range. Would you now like to have an overview of your orders or check on your delivery status? No problem: just use your personal login in 'My account'.

# Available 24/7, even on the go with tablet and smartphone

Industry insiders have long been using the easy ordering options at Meusburger and benefit from the shortest delivery times on the market. An important part of this process is the Meusburger customer portal. After its launch in German,

English and Italian, the new beta version has been available in Spanish, French and Polish since summer 2022 and gives Meusburger customers additional options and services:

#### Order via 'My account'

Offer overview with direct ordering and possibility to request expired offers again

#### **Incoming orders**

Detailed order information with current status and clear history

#### Reorder item

Ordered items can be requested again or ordered directly

# Quick order,

quick delivery

#### Order picking

and packaging for dispatch

### Complaints or returns

Intuitive logging, also possible directly via smartphone or tablet

#### Shipping

Track shipping in real time, even for partial deliveries

### Delivery of goods

to the customer

#### Accounting

Collection of all order receipts with direct download option

Learn more about 'My account':

www.meusburger.com/my-account

As a production company in the heart of the Vorarlberg Rhine Valley, we have a great responsibility towards the environment and society. CSR refers to corporate social responsibility in the economic, social and ecological areas, which we are happy to fulfil beyond what is legally required of us.

## Perfect savings programme

# Eco-friendly employee mobility

#### Well filtered

#### CO<sup>2</sup> savings in production

Switching off many machines on nonworking days saves around 580,000 kg CO<sup>2</sup> per year.

#### **Cutting fluids**

With our approach to optimising our centralised systems, we have been able to greatly reduce our cutting fluid consumption over the last 15 years.

#### Heat recovery

The waste heat from our compressors is fed directly to our heating system.

#### Cooling energy optimisation system

Cooling systems on the roof of the production halls help to reduce CO<sup>2</sup> emissions and create good working conditions.

#### Company bikes

Employees arriving by train can use the bicycles parked at the Wolfurt and Hohenems train stations to get to work.

#### Charging station for electric bikes

Staff riding electric bikes to work can charge their bikes at one of the several charging stations for free.

#### Staff transportation

Small buses are available to employees in Wolfurt to carpool to work. This makes Meusburger a partner of the klima:aktiv. project.

#### **Biking contest**

Every year, we participate in the Vorarlberg Biking Contest, in which employees promote their health and protect the environment through the kilometres they ride.

#### Oil fog

Our machinery and equipment have suction and filtration devices in order to keep the air clean.

#### Corrosion protection

We do not use corrosion protection for raw material storage in order to prevent the contamination of air, water and soil.

#### Separation of recyclables and waste

Waste is separated into recyclables and residual waste, enabling environmentally sound recycling.

#### Filtering pollutants

To a large extent, our production process is pollutant-free. Any pollutants that do arise when processing are absorbed by filtration devices.

## On a journey through time

Join us on a journey into the past. We are pleased to give you a look behind the scenes this year with the 20th edition of our 'informs'. We have collected quite a bit of news over the years since we started the company magazine, which we want to sum up for you in honour of its anniversary.

Since the beginning, our headlines have featured numerous investments and developments. And they all have one focus: to offer you added value. By making additions to our buildings, enlarging our warehouse and expanding our range and services we are doing everything we can

to contribute to your success. We also have a number of projects planned for the future so we can expand our service for you. That's why we are already looking forward to the future and to continuing to keep you up to date and inspired with our company magazine – packed full of news.

### Issues

It all started with an anniversary issue to celebrate 40 years of our company. Over the past 18 years, our company magazine has kept you up to date on company news and our services.

### Pages

Since 2004, we have been offering a mixed bag of interesting topics including interviews, puzzles, tips & tricks and much more on over 680 pages.

### Languages

German English French Italian Spanish
